EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the preliminary amendment of March 18, 2004 insert the phrase "now U.S. Pat. 6,787,005," after the phrase "...a divisional of U.S. Patent Application Serial No. 10/243,952, filed September 16, 2002," in the new paragraph added to the specification by the preliminary amendment. This updates the status of this application.

The following is an examiner's statement of reasons for allowance:

Claims 20-35 are allowable over the prior art of record because the prior art of record does not teach wherein the sputtering of at least one of the first and second contact layers comprises sputtering at least one target comprising a metal or metal alloy in an atmosphere including at least oxygen gas in order to form the contact layer(s) so as to comprise a metal oxide, and wherein more oxygen gas is introduced into the atmosphere in which the target for sputtering the contact layer(s) is located than is introduced into an atmosphere in which the target comprising Ag used in sputtering the IR reflecting layer is located; and wherein a ratio of (a) oxygen gas introduced into the atmosphere in which the target comprising Ag used in sputtering the IR reflecting layer is located, to (b) oxygen gas introduced into the atmosphere in which the target for sputtering the contact layer(s) is located, is from about 1:1.3 to 1:10.

Claims 35-36 are allowable over the prior art of record because the prior art of record does not teach wherein said sputtering of at least one of the first and second contact layers comprises sputtering at least one target comprising a metal or metal alloy in an atmosphere including at least oxygen gas in order to form the contact layer(s) so as to comprise a metal oxide, and wherein more oxygen gas is introduced into said atmosphere in which the target for sputtering the contact layer(s) is located than is introduced into an atmosphere in which the target comprising Ag used in sputtering the IR reflecting layer is located.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rodney G. McDonald whose telephone number is 571-272-1340. The examiner can normally be reached on M- Th with Every other Friday off.
